

[Let Reviewer For Secondary Math Major Pdf Download](#)

If a is a real number, the operations of addition, subtraction, multiplication, and division with zero are as follows:

$$\begin{aligned} a + 0 &= a \\ a - 0 &= a & 0 - a &= -a \\ a \times 0 &= 0 \\ 0 \div a &= \frac{0}{a} = 0 & (\text{if } a \neq 0) & \quad (\neq \text{ means "is not equal to"}) \end{aligned}$$

(a) $5 + 0 = 5$ (b) $-6 - 0 = -6$ (c) $0 - 4 = -4$

(d) $\frac{0}{6} = 0$ (e) $\frac{0}{-3} = 0$ (f) $\frac{5 \times 0}{7} = \frac{0}{7} = 0$ ■

Note that there is no result defined for division by zero. To understand the reason for this, consider the results for $\frac{6}{2}$ and $\frac{6}{0}$.

$$\frac{6}{2} = 3 \quad \text{since} \quad 2 \times 3 = 6$$

If $\frac{6}{0} = b$, then $0 \times b = 6$. This cannot be true because $0 \times b = 0$ for any value of b .

NOTE † *division by zero is undefined*

(The special case of $\frac{0}{0}$ is termed *indeterminate*. If $\frac{0}{0} = b$, then $0 = 0 \times b$, which is true for any value of b . Therefore, no specific value of b can be determined.)

$$\frac{2}{5} \div 0 \text{ is undefined} \quad \frac{8}{0} \text{ is undefined} \quad \frac{7 \times 0}{0 \times 6} \text{ is indeterminate}$$

Note: Never divide by zero. Division by zero is the only undefined basic operation. All the other operations with zero may be performed as for any other number.

◆ RATIO AND PROPORTION

Ratio: The quotient a/b is also called the **ratio a of to b**.

Proportion: An equation stating that two ratios are equal;

If the ratio of x to 8 equals the ratio of 3 to 4, we have the proportion: $\frac{x}{8} = \frac{3}{4}$

Since a proportion is an equation, if one of the numbers is unknown, we can solve for its value as with any equation. Usually, this is done by noting the denominators and multiplying each side by a number that will clear the fractions.

We can solve this equation by multiplying both sides by 8. This gives

$$8\left(\frac{x}{8}\right) = 8\left(\frac{3}{4}\right), \text{ or } x = 6$$

Substituting $x = 6$ into the original proportion gives the proportion $\frac{6}{8} = \frac{3}{4}$. Since these ratios are equal, the solution checks. ■

WORD PROBLEMS

Age

- Father is aged three times more than his son Ronit. After 8 years, he would be two and a half times of Ronit's age. After further 8 years, how many times would he be of Ronit's age?

A. 2 times

B. $2\frac{1}{2}$ times

C. $2\frac{3}{4}$ times

D. 3 times

Let Ronit's present age be x years. Then, father's present age $= (x + 3x)$ years $= 4x$ years.

$$\therefore (4x + 8) = 5(x + 8)$$
